

Get out and play!

In the beginning...

Since the introduction of the first mobile game *Snake* in 1997, Nokia has been a pioneer in the mobile games industry. In 2003, Nokia launched the N-Gage and in 2004, the N-Gage QD, the only connected mobile games handsets of the time. However, while people want great gaming capabilities, they also want a choice of devices, and Nokia evolved its strategy accordingly. The focus shifted from a dedicated game phone to a games platform which allows for easy discovery, trial, purchase, and play of compelling connected mobile gaming content on a range of N-Gage compatible Nokia S60 devices.

Download new games

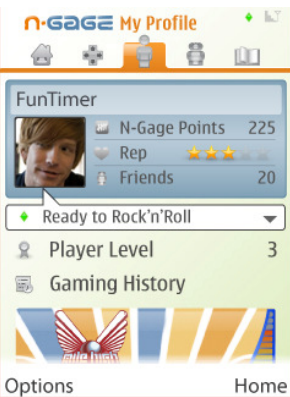

Your portal to fun

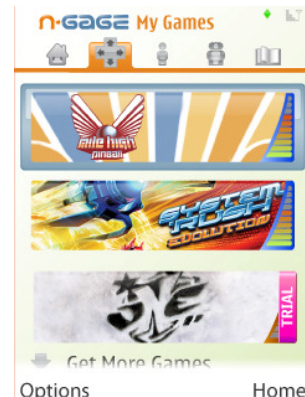

Next generation of mobile gaming

N-Gage brings exceptional, made-for-mobile gaming with best-in-class titles from top publishers featuring high-quality graphics, online features, and deep game play. Games can be downloaded directly to a compatible device or PC and trialed for free, so you only buy the ones you want.

At the heart of the N-Gage experience is the N-Gage application. Through an easy to use interface, you can discover and download new games, manage your game library, and interact with friends. The application will also keep track of your gaming history, scores, and points so you can check in on your progress at any time. The N-Gage platform will synchronize your data between your device and PC so you can also access your profile on the N-Gage website.

Track your progress

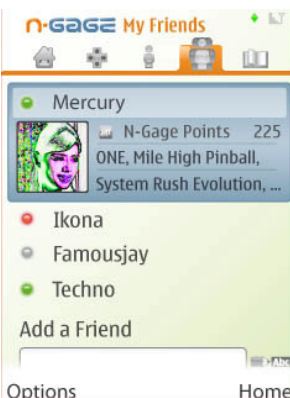

Manage your games

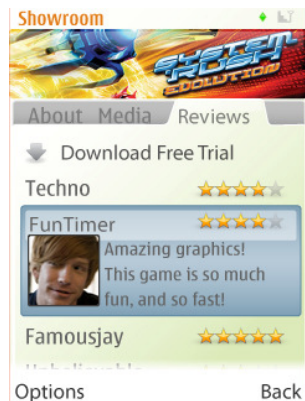

The N-Gage Arena is your place to meet and compete with friends from around the world. Connect with other players for a friendly chat or a multiplayer match and participate in a wealth of community activities such as tournaments, player reviews, game tips and more.

Distribution

Discover, download, and buy new games either over-the-air or on the Web. You can also play games in trial mode before deciding to purchase. N-Gage offers consumers more ways to get games and offers operators more ways of integrating content for their customers.

Devices

Powerful devices such as Nokia Nseries multimedia computers and other Nokia S60 3rd Edition devices are driving the growth of mobile gaming and are integral to Nokia's mobile gaming strategy.

N-Gage launch

The N-Gage service will go live in April 2008.

Today's N-Gage compatible devices include: Nokia N81, Nokia N81 8GB, Nokia N82, Nokia N95, and Nokia N95 8GB. Nokia will announce compatibility with a wide range of Nokia S60 devices on an ongoing basis.
